AUTOMATION SOFTWARE

THE HOTDOCS® PRODUCT RANGE

HotDocs Player

HotDocs Player is the end user tool for network implementations of 10 users or greater. End users can assemble documents and forms created and published with HotDocs Professional, but cannot create or edit templates. Interactive interviews guide users through logically sequenced questions. HotDocs Player computes values, determines what text to include or exclude based on user answers, changes gender references, updates verb tenses and automatically assembles documents that can be saved as Microsoft® Word or WordPerfect® documents. Assembled PDF forms can be saved as PDF files.

HotDocs User

HotDocs User is the end-user tool for implementations of up to 10 users. It provides all the same features as HotDocs Player, plus it allows users to develop simple text-based document templates.

HotDocs PDF Advantage, User Edition

Fill PDF graphical templates created using HotDocs PDF Advantage, User Edition. Just answer the interview questions—or input information directly onto the form. Choose interview answers from pick lists or pop-up tables, and easily manage answers too long for the form fields. You can also save your assembled documents and filled in forms as PDF files.

HotDocs Professional Edition

HotDocs Professional is the template and form development tool of the HotDocs product range. Expert users and developers gain more control using the advanced template development features, allowing them to create more intuitive templates with more interactive dialogue boxes, detailed help and post-assembly macros. HotDocs Professional can also be used to automate graphical forms. You can even publish finished templates to HotDocs Online Server for easy Web access.

HotDocs PDF Advantage, Professional Edition

HotDocs PDF Advantage Professional Edition is a powerful development tool for PDF forms. Developers can automate PDF forms without needing to convert them to another format; they can create intuitive interviews by grouping questions onto dialogue boxes; they can define table groupings, including repeated dialogues, to gather list information; and they can specify how entered information will appear on the filled form. As with the User Edition, developers can save documents and forms as PDF files.

 THE DOCUMENT
AUTOMATION SOFTWARE

HotDocs Online Server

Ideal for decentralised organisations and business-to-business applications, users can assemble documents from their Web browsers, without the need to have HotDocs software installed on their own PCs. Templates prompt end users for required information. HotDocs Online can be fully integrated with your organisation's business processes.

HotDocs Database Connection

Save even more time by using HotDocs Database Connection to link HotDocs variables to your organisation's database. The HotDocs program can pre-populate variables with values from your database, or create a pick-list from the values in the database.

HotDocs Integration Kit

Integrate HotDocs with a variety of applications, including document management systems, workflow, case management systems, litigation support systems, and other applications. The HotDocs Integration Kit offers technical documentation as well as sample integration code.
